

SDGP 2023/24 CW 2

“Implementation Report”

Template and Guidelines

Deadline

Monday, 18th of March 2024, on or before 1 PM via
Blackboard and Google Form - <https://forms.gle/4eASqr8hT3ExEPSB7>

Vivas will be from the 19th of March 2024 onwards. Viva's schedule will be added to the SDGP main document

Other useful documents

- [SDGP CW 2 Marking Scheme](#)
- [SDGP CW 2 Explanation Lecture \(Semester 2 Week 1\)](#)
- [Former IIT students FYP Sample Thesis](#)

Things to submit -

1. Implementation Zip file
2. Implementation group report
3. Video demonstration

SDGP Module information for the Cover page

Module Name - Software Development Group Project

Module Code - 5COSC021C

Module Leader - Banuka Athuraliya

Topics to be covered

The following topics must be covered in the Implementation.

1. Cover Page
2. Declaration Page
3. Abstract + Keywords
4. Acknowledgement
5. Table of Contents
6. List of Figures
7. List of Tables
8. Abbreviations table

9. Chapter 1: Implementation
10. Chapter 2: Testing
11. Chapter 3: Evaluation
12. Chapter 4: Conclusion
13. References
14. Appendix

You have to make a demo video of your SDGP prototype and record the functionality working as given in CW 1. If you have a hardware component, you need to demo that functionality too.

Guidelines to be covered

Ensure to include a good cover page with all the important information according to the university standards. The cover page should not contain a page number. Numbering starts from the declaration page and it should be numbered using lowercase roman letters.

The main content of the document starts from this point onwards.

The main content should use an indo-arabic numbering system. There is no set page limit for the implementation report.

You get marks for formatting. Therefore, make sure that the document is well-formatted. The following are mandatory for every team report,

- The top right of the document should mention what chapter it is. Eg - "Chapter 1 - Implementation" or "Chapter 2 - Testing". It should change from chapter to chapter. This can be done using Section breaks on Microsoft Word. Watch some tutorials on it if you don't know how to do it.
- Bottom right you should have the page number
- Bottom left you should have your team name and number (Eg - "IIT - SE-1")
- Use the appropriate font sizes (H1 size 16, H2 size 14, H3 size 12, and Body size 12) - and the font must be Times New Roman and NOT any other fancy fonts!
- Make sure the text is justified and proper alignment is there.
- Images and tables should have captions and must be linked to the list of figures and tables.
- Don't have blank spacing unnecessarily.

It is a must to have the table of contents, list of figures, and list of tables. (All this must be auto-generated and NOT typed)

Make sure to use uniform numbering in the document. Chapter 1 numbering should be 1, 1.1, 1.1.1, etc. Chapter 3 should be 3, 3.1, 3.2, 3.2.1, etc.

Have references to prove your statements or points. It will give credibility to what you say with references most of the time. Rather than you saying something, it is best to use valid research work to prove your statements. It is Mandatory to use the Harvard referencing style.

Bonus marks will be given for if the student or team has won any recognized competition.

Make sure everyone contributes to the project report, and it is recommended that you use Google docs to collaborate with your team (as this will be checked during the viva to see the Individual contribution) and we recommend you finalize the formatting of the document finally using Microsoft Word.

The report must be written in Third-person, therefore please don't use terms like "We" or "I". Check other IIT thesis or Sample thesis shared to get an idea.

Chapter 1: Implementation

You can decide the topics that should be covered in your Implementation chapter. To get an idea, check the older thesis shared with you.

1.1 Chapter Overview

This is a small introduction to your chapter.

1.2 Overview of the prototype

Provide a summary of the implemented prototype

1.3 Technology selections

Justifications on the technologies selected and used.

1.4 Implementation of the data science component

Explain in detail how the data science component has been implemented (with screenshots and justifications)

1.5 Implementation of the backend component

Explain how the backend is structured (with screenshots and justifications)

1.6 Implementation of the front end component

Explain how the frontend is structured (with screenshots and justifications)

1.7 GIT Repository

Explain how you used GIT with your project (with screenshots and justifications)

1.8 Deployments/CI-CD Pipeline

Explain about the deployment pipeline (with screenshots and justifications)

1.9 CRUD operations

This should contain a section for each student and with screenshots of code and justifications, should contain how everyone was involved with the development of CRUD operations.

Chapter 2: Testing

You have the freedom to decide the topics that should be covered in your Testing chapter. To get an idea, check the older thesis shared with you.

2.1 Chapter Introduction

This is a small introduction to your chapter.

2.2 Testing Criteria

Explain the criteria selected for testing

2.3 Testing functional requirements

Test results for all functional requirements

2.4 Testing non-functional requirements

Test results for non-functional requirements

2.5 Unit testing

Proof of unit testing conducted (with screenshots and justifications)

2.6 Performance testing

Proof of performance testing conducted (with screenshots and justifications)

2.7 Usability testing

Proof of usability testing conducted (with screenshots and justifications)

2.8 Compatibility testing

Proof of compatibility testing conducted (with screenshots and justifications)

2.9 Chapter Summary

This is a small summary of your chapter.

Chapter 3: Evaluation

*You have the freedom to decide the topics that should be covered in your Evaluation chapter.
To get an idea, check the older thesis shared with you.*

3.1 Chapter Overview

This is a small introduction to your chapter.

3.2 Evaluation methods

Explanation of evaluation methods used

3.3 Quantitative evaluation

Justifications for quantitative evaluation

3.4 Qualitative evaluation (Feedback from end users, domain experts and industry experts)

Justifications for qualitative evaluation

3.5 Self evaluation

Self evaluation must be conducted by all group members individually and this section will have feedback from all group members.

3.6 Chapter Summary

This is a small summary of your chapter.

Chapter 4: Conclusion

4.1 Chapter Overview

This is a small introduction to your chapter.

4.2 Achievements of aims and objectives

Explain how this project has been successfully completed and how the aims and objectives of CW 1 - SRS has been achieved.

4.3 Limitations of the research

Explain the limitations of the research and any areas you couldn't complete due to the limitations with justifications.

4.4 Future enhancements

Explain the future enhancements of this project and research

4.5 Extra work (Competitions, research papers, etc)

List down and provide proof of all the competitions/conferences/hackathons you or your team has taken part in during the SDGP time. If one person in a team has even participated individually, please add proof here for bonus marks.

4.6 Concluding remarks

Conclusion of your project

References

Harvard referencing Westminster style ONLY accepted

For this the page numbering should be Uppercase roman numerals

Appendix

Each section under the appendix should be named "Appendix A", "Appendix B" etc.

For this the page numbering should be Uppercase roman numerals
